

PRICE LIST 2026

Product list 2025

Last revision: May 2025

**All our products are visible and available for purchase on the website
www.ad-maiora.eu**

The images shown in the price list are for illustrative purposes. This means that every single item may not have the endowment shown in the figure below delivery. Variations can be made without prior notice. Ad Maiora S.r.l. is not to be considered responsible for damages deriving from the lack or inaccuracy of the information reported here. The use of the devices described in this catalog is reserved for surgeons who are specifically trained in their application and have completed training courses for the correct implementation of the technique.

Therefore, we invite you to check when ordering with our commercial operators for optimal configurations to meet your specific needs.

Ad Maiora S.r.l.

Ad Maiora aims to develop effective and safe surgical techniques for veterinary patients and create tools that facilitate the surgeon's tasks. Thanks to the intellectual contributions and direct experiences of collaborating surgeons, Ad Maiora sees itself as a constantly evolving entity, striving to provide effective solutions to challenges encountered in surgical practice.

An Ad Maiora tool is a tangible manifestation of the ideas and passion that drive veterinary surgeons. Founded in February 2013 by four individuals, Ad Maiora sought to play a more entrepreneurial role in the design, development, production, and marketing of innovative products for veterinary surgery, leveraging diverse skills.

The fundamental criterion is to address the needs of new techniques, materials, and systems in the rapidly expanding field of veterinary surgery. This involves actively listening to inputs from surgeons and translating them into solutions, thereby serving as the nexus between medical, engineering, and industrial aspects, all while respecting the unique characteristics of the veterinary world.

Collaborations on both the medical and engineering/industrial sides have proliferated, leading to several ongoing development projects, some of which have resulted in patented products.
